
Our model (cloglog link)
Profiles shown
observes η_{itj}, $j \in \mathcal{J}^+$
First response
reports j^*_{it}, knows u^*_{it}
Second response
reports $y_{it} = w$ if
$F(u^*_{it}) \in [\alpha_{w-1}, \alpha_w)$
η_{it0} resolved
at purchase
η_{it0} resolved
before answering
Second response
reports $y_{it} = w$ if
$u^*_{it} - \eta_{it0} \in [c_{w-1}, c_w)$
